

Azul Systems Production Support Offerings

Zing and Zulu Runtimes for Java

Azul Systems offers world-class support services for Azul's JVM products, Zing® and Zulu®. Our highly trained customer support engineers have extensive experience and deep knowledge of the JVM, memory management, Java performance issues and usage of production application visibility tools.

Our team is distinguished by its expertise, responsiveness and attention to detail. We pride ourselves on providing clear, thorough explanations of sometimes complex issues in a way that is understandable and actionable for customers. Long-term high satisfaction and renewal rates demonstrate our commitment to customer success.

Why Azul Systems Support?

We do more than just provide basic support. We help customers understand Java application performance issues, allocate memory correctly using Azul products and investigate potential bugs. We provide data to engineering as needed and return a patch to the customer when released.

Deep Knowledge and Experience. Each of our support engineers has significant industry experience. From your first contact with support, you're working with a knowledge-

able person who can help resolve your problem quickly. And, our case ownership process is completely transparent so you don't have to restate the problem at any time.

Commitment to the Success of Your Solution. Our support staff are excellent troubleshooters, but also advisers and solution experts. They can guide you through the best deployment options for your Azul products and work with you throughout the process to ensure success.

Access to Innovation. The support subscription gives you immediate access to the latest enhancements from our R&D team dedicated to improving JVM performance.

Ongoing Improvements. Azul support provides direct access to bug fixes, patches and the latest documentation.

Powerful Production Tools. Zing ships with powerful tools that provide zero-overhead production visibility into running applications. Our support team can help you get the most out of this information to diagnose issues and improve application performance and reliability.

SUPPORT SERVICE HIGHLIGHTS
